

Front-End Development

Week 2 Task Report

FATIMA KHAN

Project Title

VoltDrive – Landing Page UI for an Electric Vehicle Startup

Introduction

For this task, I designed a modern landing page UI for an imaginary electric vehicle startup named **VoltDrive**. The main objective of the project was to create a visually appealing and user-friendly interface using only HTML and CSS while following modern web design principles.

The website is inspired by premium automotive brands and focuses on delivering a clean, professional, and performance-oriented appearance.

Objective

The objective of this project was to:

- Design a responsive and visually appealing landing page.
- Practice creating layouts using Flexbox.
- Improve skills in HTML structure and CSS styling.
- Maintain proper spacing, alignment, and visual hierarchy.
- Apply modern UI design concepts in a real-world scenario.

Technologies Used

- **HTML5** for creating the structure of the webpage.
- **CSS3** for styling and layout design.
- **Flexbox** for arranging elements and maintaining alignment.
- **Google Fonts (Poppins)** for modern typography.

Website Sections

1. Navbar

The navigation bar is positioned at the top of the page and provides quick access to different sections of the website such as Models, Technology, Performance, and Contact. A "Pre-Order" button is also included to represent a call-to-action element commonly found in startup websites.

2. Hero Section

The hero section serves as the main attraction of the landing page. It features a full-screen background image of a luxury electric sports car along with a strong headline and a short description of the product. Action buttons are provided to encourage user interaction.

3. Features Section

The features section highlights the main selling points of the product using four feature cards:

- Long battery range
- Fast charging technology
- AI-powered driving assistance
- Zero-emission transportation

These cards are arranged using Flexbox to maintain equal spacing and alignment.

4. Footer

The footer contains additional navigation links and copyright information. It provides a clean ending to the webpage and follows the overall design theme.

Design Approach

The website uses a dark luxury-themed color palette inspired by premium sports car brands. Shades of black and gray are combined with red accent colors to create a modern and elegant appearance.

Special attention was given to:

- Consistent spacing
- Proper alignment
- Readability of content
- Balanced color usage
- Minimal and clean design

Flexbox Implementation

Flexbox was used throughout the project for layout management. It was specifically implemented in:

- Navbar alignment
- Hero section content positioning
- Feature card arrangement
- Footer layout

Using Flexbox made the design more organized and easier to maintain.

Challenges Faced

One of the main challenges during development was creating a full-screen hero section with the background image covering the entire screen while keeping the text readable. This was solved by using a dark gradient overlay on top of the image.

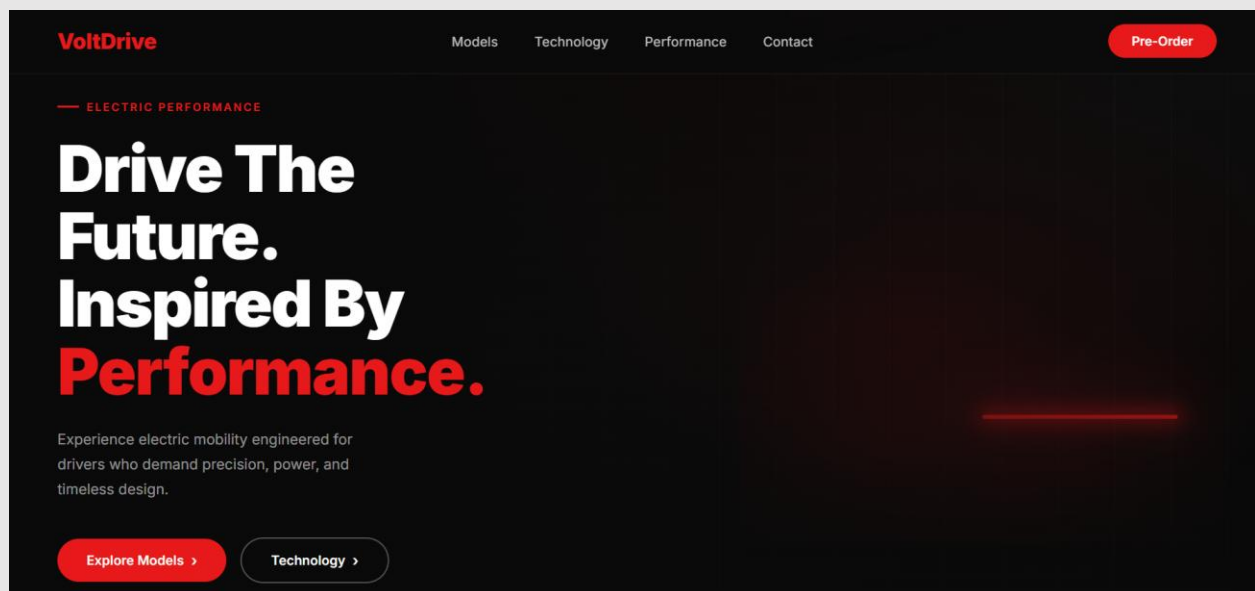

Another challenge was maintaining proper spacing between components to achieve a professional appearance.

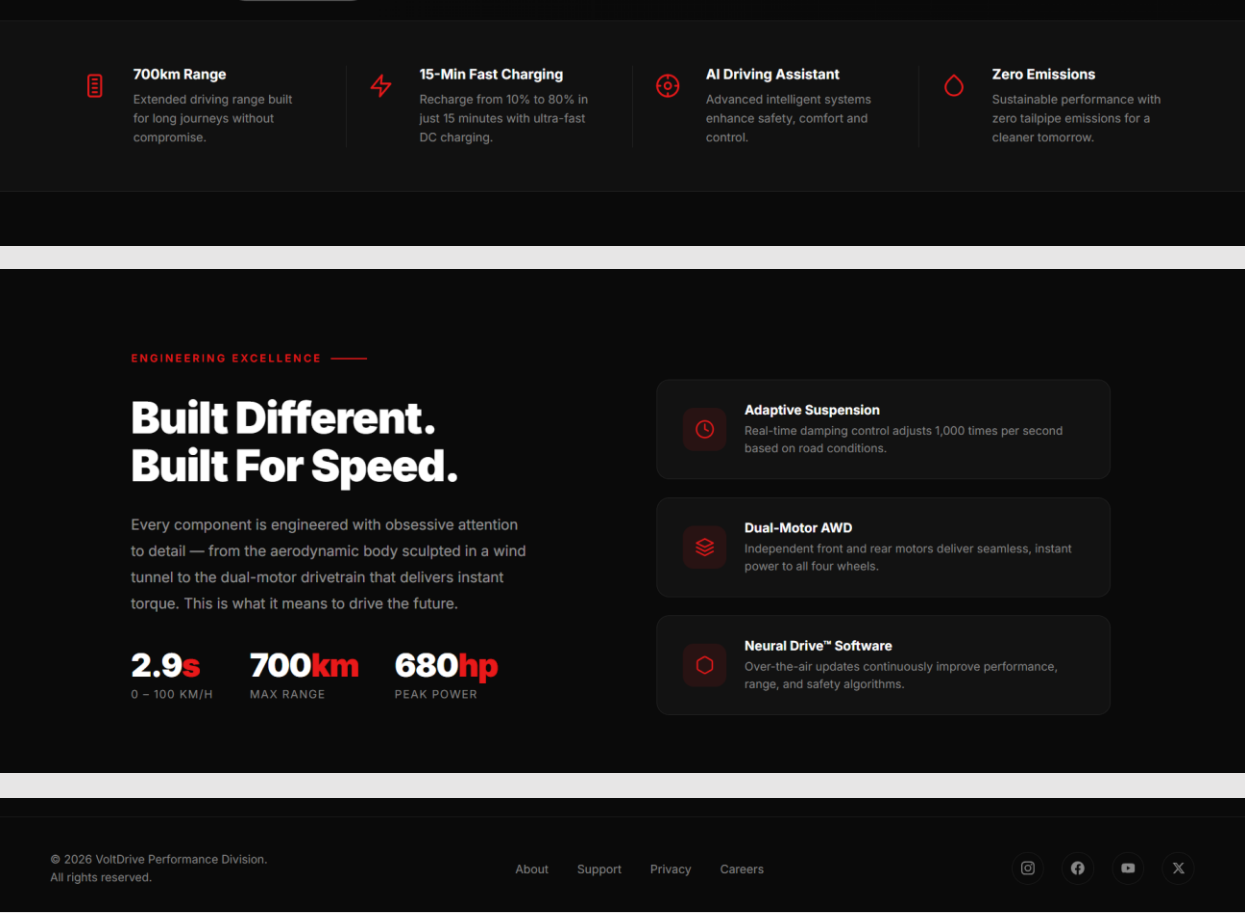

Conclusion

This project helped me strengthen my understanding of HTML and CSS fundamentals, especially Flexbox layouts and modern UI design techniques. It also provided practical experience in creating a startup landing page that balances functionality with aesthetics.

The final result is a clean, modern, and visually appealing landing page for an electric vehicle startup that fulfills all the requirements of the assignment.
